Market today: Low liquidity

(Nguyen Huy Phuong – phuong.nh@vdsc.com.vn)

- The market is under pressure to correct after 5 sessions of being blocked at the 1,277 point area.
- The market is expected to be supported at the 1,260 point area and have more time to test the supporting cash flow.

The market was red when it entered the last trading session of the week. The market was quiet on a low liquidity basis. Recovery efforts during the session were unsuccessful and red dominated the entire trading session. By the session’s end, supply pressure increased but overall the market still made an effort to stabilize above the 1,260 point area. VN-Index decreased by 4.78 points (-0.38%), closing at 1,262.57 points. Matching liquidity decreased with 395.2 million shares matched on HOSE.

VN30-Index decreased by 3.97 points (-0.3%), closing at 1,331.58 points. In the group, there were 8 gainers such as MWG (+1.7%), VIB (+0.8%), BVH (+0.6%), STB (+0.6%), TCB (+0.4%) ... On the contrary, there were 22 losers, namely PLX (-1.8%), MSN (-1.4%), HPG (-1.1%), SHB (-1%), VPB (-0.8%)....

With the market's poor performance, many stock groups retreated into the red zone, but overall the decline was not large. Retail and Insurance groups made efforts to increase points and supported the general market.

Foreign investors continued to be net sellers on HOSE, with a value of 24.3 billion VND. They sold heavily at VCB (-54.2 billion), HPG (-37.1 billion), CMG (-32.1 billion), VPB (-20.8 billion), EIB (-20.6 billion) ... However, they bought strongly at HDB (+58.1 billion), CTG (+38.3 billion), SSI (+34.4 billion), PVD (+32.4 billion), PDR (+24.5 billion)....

The market is under pressure to correct after 5 sessions of resistance at the 1,277 point area. Liquidity has decreased compared to the previous session, showing that the supporting cash flow is still limited, but the supply has not put too much pressure on the market. Currently, the market is being supported at the 1,260 point area. It is expected that the market will continue to be supported at this area and have more time to test the supporting cash flow. If the cash flow continues to create support momentum, the market still has the ability to recover and widen the uptrend. Therefore, investors need to observe the supply and demand developments to assess the market status. Temporarily, investors can still exploit short-term opportunities in some stocks that have improved from the support area. However, investors still need to consider taking short-term profits for stocks that are under pressure from the resistance area.

Technical Analyst Recommendations

The market corrected after 5 sessions being resisted at 1,277 points. Currently, the market is being supported at the 1,260 points area, the convergence area of the MA lines. It is expected that the market will continue to be supported at this area and have more time to test the supporting cash flow. If the cash flow continues to create support at this area, the market still has the ability to recover and has the opportunity to expand the uptrend. Therefore, investors need to observe the supply and demand developments to assess the market status. Temporarily, investors can still exploit short-term opportunities in some stocks that have improved from the support area. However, investors still need to consider taking short-term profits on stocks that are under pressure from the resistance area.
