ANALYST-PINBOARD

Update on Plastic Sector

MARKET AND TRADING STRATEGY MARKET COMMENTARY

- The market continued to correct after being strongly resisted at the 1,770 point area in the previous session. Liquidity decreased compared to the previous session, indicating that cash flow temporarily showed cautious action ahead of the market's correction potential.
- Currently, although the market has pulled back close to the 1,700 point support area, the supportive reaction from cash flow is not yet clear, leading to the potential for the correction to continue in the next trading session. This action may bring the market back to the 1,700 point area, or retest the MA(50) area, the 1,680 point area, in case the VIC group still creates a large negative impact on the index. However, the correction activity is for market rebalancing and the market still has the opportunity to increase in price again after the correction.

TRADING STRATEGY

- Investors should temporarily remain cautious of the market's potential for correction. However, the main impact on the decline in index points is the VIC group, so some stocks may still show bullish reactions after having pulled back to good support areas or having formed positive accumulation bases. Investors can take advantage of the market correction to accumulate these stocks at favorable prices.
- Investors can consider a group of stocks with underlying stories or that easily attract cash flow in December such as the Retail group, Food group, Public Investment group; or some large-cap stocks that can replace VIC in supporting the market, such as Banking stocks, FPT, VNM...

INVESTMENT THESIS

- In Q3 2025, Vietcombank (VCB) reported a favorable performance, although the growth rate was not very strong. The total pre-tax profit (LNTT) reached VND 11.2 trillion, up 5% year-on-year and 2% quarter-on-quarter, helping the bank achieve 71% of its full-year profit forecast. Net interest income was VND 14.7 trillion, an 8% increase compared to the same period last year and a 4% increase compared to the previous quarter, driven by strong credit growth, particularly in consumer and real estate loans.
- VCB's credit growth remained stable, with the bank's credit growth reaching 12.2% year-to-date, higher than the industry's growth rate. Personal loans grew by 15% year-to-date, while FDI corporate loans recorded a 17% increase. However, non-interest income declined mainly due to a drop in foreign exchange income and a significant decrease in net fees, as the bank stopped recognizing upfront fees from bancassurance agreements. Despite this, bad debt recovery continued to be a bright spot, positively contributing to non-interest income.
- Although growth in this quarter was not high, Vietcombank has maintained good cost control and stable long-term prospects. However, pressure on the Net Interest Margin (NIM) is a short-term risk to watch, as the cost of funds may rise as the bank continues to increase interbank borrowings. The bank has maintained a low bad debt ratio and a high coverage ratio, demonstrating its superior credit risk management capabilities.

KEY FINANCIAL INDICATORS

TECHNICAL VIEW

- Although there is no signal yet of breaking above the MA(20) line, VCB is showing some signals that could curb the correction trend that started in late August 2025. Concurrently, the 57 support area is also performing well in supporting the price. The recent supportive oscillations may create the expectation that VCB will soon break above the MA(20) line and shift towards a short-term upward direction in the near future.
- Support: 57,000 VND.
- Resistance: 67,000 VND.

Ticker	Technical Analysis
<div><div>KSB</div><div>Sideway</div></div>	<div><div><div>Support</div><div>18.0</div></div><div><div>Current Price</div><div>18.75</div></div><div><div>Resistance</div><div>21.0</div></div></div> <div><p>➤ Although there is no clear bullish signal yet, KSB has shown action of forming a tight price base at the MA(200) area. This action may help KSB end the correction phase that began in mid-September 2025. Concurrently, the signal of improving cash flow in recent sessions also creates an opportunity for KSB to shift towards a short-term upward direction in the near future.</p></div> <div></div>
<div><div>PTB</div><div>Sideway</div></div>	<div><div><div>Support</div><div>50.0</div></div><div><div>Current Price</div><div>51.4</div></div><div><div>Resistance</div><div>56.0</div></div></div> <div><p>➤ Although still cautious ahead of the MA(200) line, PTB's potential for weakening has significantly decreased after multiple contacts with this line. Concurrently, the signal of gradually increasing from the 49 support area accompanied by improving liquidity recently is also a noteworthy support signal. This action is creating an opportunity for PTB to attack the MA(200) line and shift towards a short-term upward price direction in the near future.</p></div> <div></div>

HIGHLIGHT POINTS

Update on PVC resin price

(Duong Tran – duong.tt@vdsc.com.vn)

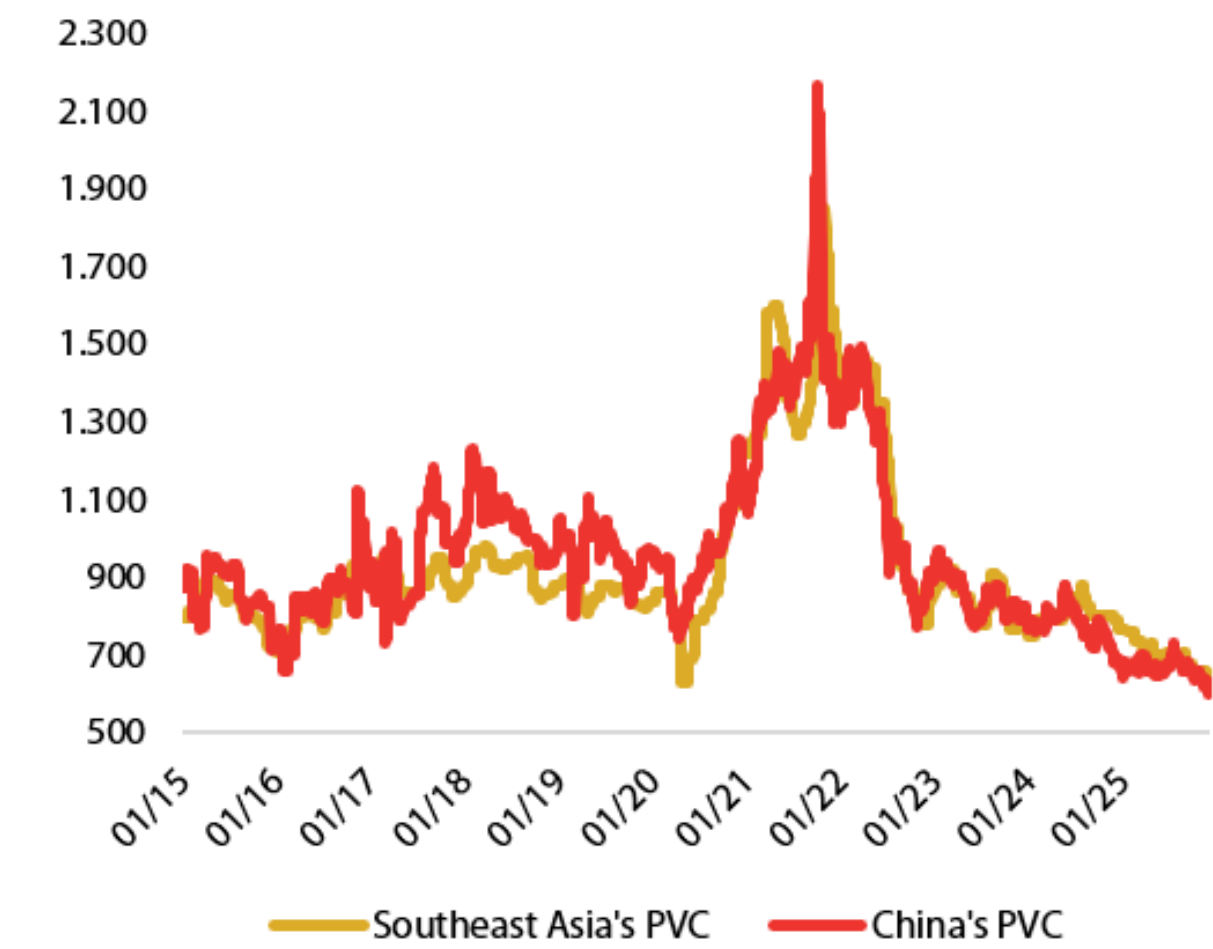

- PVC prices hit historic lows: Prices across major markets have fallen to multi-year lows, reaching levels last seen in 2016 in China and 2020 in Southeast Asia.
- China-driven oversupply pressure persists: Approximately 2.5 million tons of new capacity coming online has pushed the market into an oversupplied state, with an estimated surplus of 364 thousand tons in 2025.
- India’s policy easing provides limited support: The cancellation of BIS certification has reduced technical export barriers, but remains insufficient to reverse price weakness amid ongoing global oversupply.

PVC resin price movement – Bottoming out

PVC resin prices fell sharply to historical lows in 2025. As of early December 2025, PVC prices in China and Southeast Asia were recorded at USD 603/ton (-10% YoY, -8% QoQ) and USD 630/ton (-18% YoY, -7% QoQ), respectively, marking the lowest levels since February 2016 and March 2020.

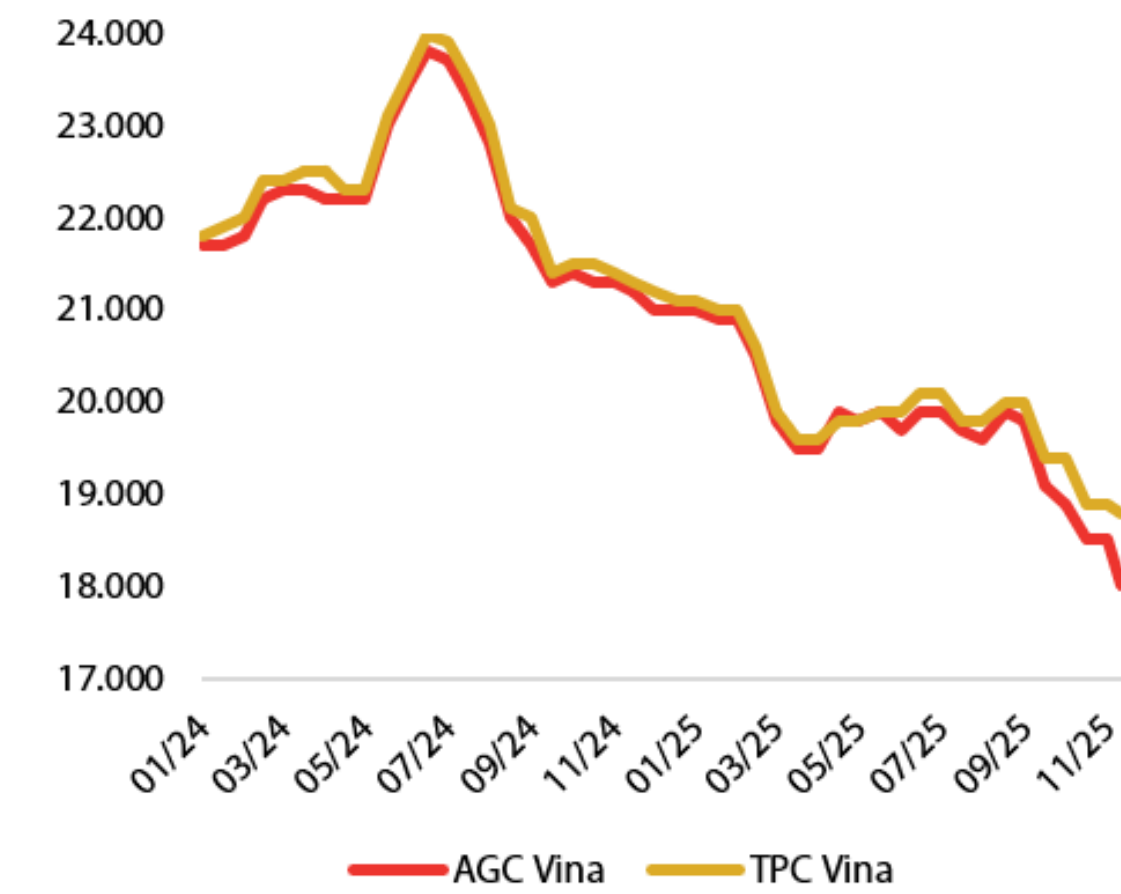

In the domestic market, PVC prices from AGC Vina and TPC Vina also declined to their lowest levels since 2023, with November 2025 quotations at approximately VND 18,500/kg (-13% YoY, -6% QoQ).
